

Franke Fact Sheet

Company

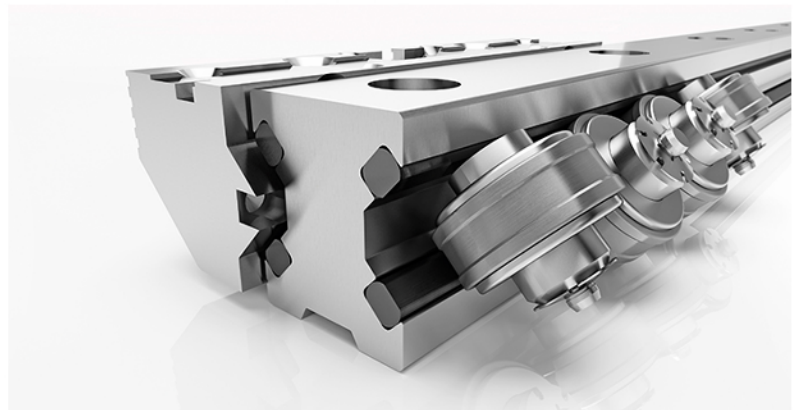

Franke is the inventor of the Wire Race Bearing and global technology leader in the development and production of light-weight motion systems. At all times we focus on the highest standards of engineering, quality and customer service. Today Franke acts as a specialist for customized designed bearings and linear systems all over the world. In our company in Aalen, Germany, more than 200 people work together in research & design, production and administration.

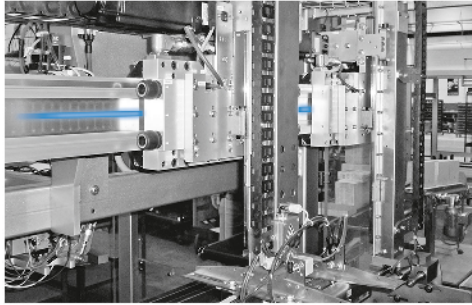

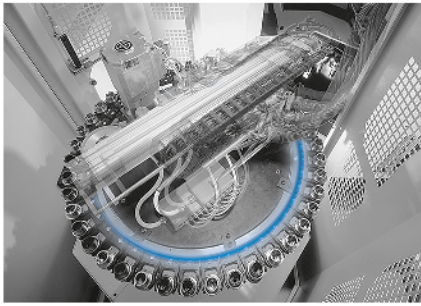

Franke Principle

In Franke Wire Race Bearings and Linear Systems, the rolling process does not take place directly between the rolling element and the mating structure, but instead with low friction on the inserted raceways. Our customers may choose whichever material, geometry, size, bore pattern, gear and sealing they require. The material for the mating structure ranges from all sorts of steel, aluminium, bronze up to plastics, carbon (CFK) or 3D-printing.

Franke Linear Systems are used across a broad variety of different industries – among them the food and packaging sectors. In many cases, their smooth and quiet running is essential to achieve trouble-free operation.

A broad variety of different applications

Our customers are as diverse as our product program. They are at home in fields such as mechanical engineering, medical technology or the textile industry. The trust that our customers place in us and our products confirms: Our Wire Race Bearings are convincing thanks to their high performance and flexibility - irrespective of the machine or the industry in which they are used.

Product consulting

Franke bearings and Linear Systems adapt to suit your specific case. We are pleased to advise you during design and engineering. Get in touch with us directly to discuss your application, or use our product consultant to let us know in advance what you need.

We will analyze your data and propose a solution, unbinding and free of charge. Our representatives all over the world are gladly prepared to assist you.

Franke Worldwide

Whether you would like further information about our products or whether you need assistance during installation - our representatives all over the world will gladly assist you. www.franke-gmbh.com/contact
